

Lodrino (superiore) dx

Lodrino superiore, Lodrino, Val Lodrino Superiore, Riale di Drosina

Create: 2023-03-09 20:53:59	Update: 2023-10-14 09:16:20	Print: 2024-12-22 02:12:53
Country: Schweiz / Switzerland Region: Kanton Tessin / Cantone Ticino Subregion: Bezirk Riviera Town: Lodrino		
Difficulty: a little difficult	Grading: v4 a4 III	Total time: 7h20
Approachtime: 2h	Tourtime: 5h	Returntime: 20min
Altitude entry: 1110m	Altitude exit: 665m	Delta Altitude: 445m
Canyon length: 2500m	Highest rapell: 50m	Amount rapells: 13
Transport: Car optional	Rock type:	drainage area: km ²
Season:	Orientation: Southeast	Best Time:
Rating: ★ 3.6 (1)	Info: ★ 2 (1)	Belay: ★ 0 ()
Specialities:		
Gear: Ropes: 2x 50m		
Summary: (machine translated) Attractive but relatively long and watery canyon part, largely open in contrast to the adjoining parts. Lodrino (superiore) sx (Riale di Mercori) is not yet described as of today.		
Hydrology:		
Access: (machine translated) From the freeway junction (Gotthard/Bernardino) north of Bellinzona on the N 2 northwards. Shortly after passing through Cresciano, turn left and drive to the other side of the valley to Lodrino (approx. 12 km from the interchange). Enter the village (on the right) and after the bridge over the stream take the 3rd street on the left. Park the first car in front of the cemetery (do not use the parking spaces in front of the supermarket and under the trees in the center of the village). \nWith the second car go north in the direction of Iragna and after almost 2 km (from Lodrino) immediately after the houses of Rodaglio turn left at a commercial establishment (GPS coordinates: 46°19'02.46 "N / 8°58'19.70 "E) turn left onto a small road that leads up to the houses of Legri (ignore the exit to the right - access to the upper Iragna). The road continues straight ahead until it ends in an open area (helipad) (or continues as a dirt road to the west). Park the second car here.		
Approach: (machine translated) From the parking lot (580 m a.s.l.) on an initially concrete path up to a meadow with a house. Here the path turns left and climbs only moderately high above the canyon to the steel bridge over the middle Lodrino (635 m a.s.l.). Now the path goes up in serpentines, passing the access to the middle Lodrino on the right. At about 800 m a.s.l. the path begins to slowly and steadily climb up the southern slope of the Lodrino into the long valley behind. Passing the former Alpe Dureda (890 m a.s.l.) we reach the side valley Val di Drosina (of Val Lodrino). Here the path turns WNW. At 1050 m a.s.l. a path on the right descends to a destroyed iron footbridge (entry).		
Tour: (machine translated) After smaller rappels in a forest canyon we come to C 50, the only higher rappel. After that open riverbed with some narrower passages. The Lodrino sup. should only be climbed if the water level would also allow an ascent of the lower (and middle) part, since also in the L. sup. are narrow passages that are critical at increased water flow and are not yet secured for an appropriate ascent (2008).		
Return: (machine translated) After a long walking passages, at the access to the Lodrino med. (7 m jump before the ramp with the high rappel), exit to the right and return on the ascent path. Of course, it is possible to add the middle part of the Lodrino and continue until the railroad bridge at the beginning of the lower part.

Automatisch importiert von Descente-Canyon.com für Canyon Lodrino (supérieur) Fait l'intégral. Après le point 636m, le chemin n'est pas très marqué mais quand-même visible. Quelques troncs à contourner. Pas mal de section de marche sur la partie supérieure. Jolies cascades et jolis saut (important de les vérifier). Partie intermédiaire, plus encastrée et plus ludique. Et partie inférieure, magnifique, belle ambiance. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/21001/observations.html>)
