Summary: (machine translated)
Limestone; in the 1st part partly turbid water due to sandy bottom; from the middle worthwhile; mostly little water, but large catchment area; several rappelling points in the watercourse; partly slippery; well equipped; Questionable is the prohibition sign of Vione 2, since outdoor operators also offer the 2nd part; ticket for the 2nd part not necessary; risk of burglary at the parking entry.

Access: (machine translated)
approx. 30-40min depending on traffic + 10min scaffolding.
From Torbole take the "SS45bis" through Riva and Limone, until "Prato della Fama". Here you park the shuttle car if you go the Johanna 2 (Vione 2) (parking next to the road or at the small port in front of the tunnel. €5,- day parking ticket)). With the 2nd car you continue through the long tunnel and turn right towards Tignale. From here you follow the mountain road for about 5Km which then meets a bridge (exit Vione 1 or entry Vione 2). It is better to park the car in the direction of Piovere after the first bend in the serpentine road. To enter the whole canyon (Vione 1+2), go up towards Piovere until the 2nd hairpin bend. Here, follow the poorly paved road 252 (marked on the stone) up to trail 265 Tignale-Aer. Limited parking at the left bend at 460Hm.

Approach: (machine translated)
You enter directly at the bridge (300Hm) that crosses the Vione.

Tour: (machine translated)
The Vione 2 begins at 300Hm at the bridge. To our surprise, the canyon is passable again, although the first half, with many walking passages and short abseils is not so convincing. Only from the middle the canyon becomes more continuous and worthwhile. Here, several abseiling points (partly jumpable) follow each other, without a long way. The highlight of the tour is the 50m rappel. This is best rappel from the left. The right stand is difficult to reach. Then follows a short step and walking passages before the stream flows into the Garda (65Hm).

Return: (machine translated)
Arrived at the lake (65Hm)go back to the parking lot on the left.

After a high flood, the rocks are currently super grippy! Lots of fixed material damaged, but metal points still fine. Murky water makes jumping difficult. Super beautiful and diverse rock during the descent, and an old archway on the left side early on. Very cool.

Coordinates adjusted. Upper part lousy, below very nice. Water level top. One slide we freed from a tree. (machine translated)
