The access description in "Swiss Alp Canyon tome 1" is correct, but it is not possible to turn left at altitude 1600m. Follow the trail east to point 1732, then return west for +/-150m horizontally. Several metal rods in the middle of the traverse. Traces of yellow or orange paint are visible all along the access, but are sometimes widely spaced. There are paths all along the access except on the grassy slopes of Im Halpi and on the descent from the scree slope. Access 3h45 with a short search at 1732m. Complete descent in 6h30 with 4 people. Small trickle of water in the first sections, then sudden increase in flow at 3pm to reach a "correct flow" (karst-related?). Very hot at first (full sun), then cold at the bottom of the canyon. The sun doesn't reach the valley floor this season. (machine translated)
