<b>Spécialités:</b>		
<b>Matériel:</b> Cordes: 3x60m		
<b>Résumé:</b> (traduction alternative) Impressive, open abyss canyon above the Inn Valley. The lower part, with its 215m high, partly overhanging waterfall, offers a very nice change from the other, mostly narrow canyons.		
<b>Hydrologie:</b>		
<b>Accès:</b> (traduction alternative) Coming from Innsbruck, take the A12 highway towards Bregenz and take the Mils/Schönwies exit. Then follow the B171 and immediately after the second Inn bridge turn right onto the Milser Landesstraße. After a few meters, take the first turn-off to the left (Bichlifelder) and then immediately turn right again. Now follow the road (along the edge of the forest) to the Starkenbach forest chapel. You can park on the right just before the chapel.		
<b>Approche:</b> (traduction alternative) Follow the panorama trail until it crosses the stream at approx. 1100m.		
<b>Tour:</b> (traduction alternative) At the beginning, several smaller rappels and walking passages follow each other. The main part is certainly the 215m high waterfall at the exit. It is rappelled via a total of 4 intermediate stands.		
<b>Retour:</b> (traduction alternative) After the last rappel, follow the stream for a short while and then turn left onto a path. Follow this for a few minutes down to the Milser Landesstraße and then turn right back to the parking lot.

The path from the chapel to the entry point is very long and leads over a good 100 unnecessary meters in altitude, which you descend again. However, as the name suggests, it is very impressive. There is an alternative access from the other side of the Panorama Trail, which offers additional, direct access to the final waterfall. The two anchors in the upper part are top-notch (12 mm, stainless steel with two rings, single pitons), although a few exciting climbing sections remain. We have placed the following new anchors: After the first known V - chain anchor (orographic right) a chain anchor stainless steel after a good 18 m orographic left behind an edge (not visible from above). The first rappel is thus divided into C 18 and C 28 (according to our measurement). Pulling off was possible without any problems. The second belay consists of 2 glued anchors a few meters outside the waterfall, also on the left. The anchors stick out a little too far from the rock. The third belay is also located a few meters from the waterfall, a good five meters above a prominent rock edge. It consists of two bent stainless steel bolts with a galvanized screw chain link. The anchors are connected with a thin green cord. In addition, there is a flat bent glued anchor and an anchor that is 70% pulled out of the rock. Here we have placed two new single pitons (galvanized, 10 mm, with a ring). The fourth belay is a sporty 55 meters away, again well away from the watercourse. It consists of two glued anchors, which are also too far out of the rock, and a bolted bolt plate with two chain links; the washer is missing here. We redrilled the next, fifth and last belay, after a good 45 meters orographic left near the left watercourse in a niche. It consists of two single pegs (galvanized, 10 mm, with a ring). There are still 45 meters to the bottom. All information without guarantee, check anchors! (traduction alternative)

2023-10-28 | Clarissa Linder | ★★☆☆ | 📖★★★ | 📍★★ | 🌊 Normale | 👍 Terminé

Great canyon, even after rainfall/in the fall! A head for heights is an absolute prerequisite for the 4 intermediate belays. We had problems pulling off the rope at the 1st intermediate belay, but after climbing back up once it worked with a pulley (maybe the belay on the left side is better? But always over edges...). There are more intermediate belays in the watercourse than the 4 described in the topo, but of questionable quality. Take enough light pull-off ropes with you! (traduction alternative)
